

Engineering to Face Climate Change

Technical solutions play a key role in overcoming current and future challenges. At TU Hamburg, we research and develop innovative solutions for a modern, dynamically developing world.

Among other things, we work on projects for sustainable infrastructure and energy systems, efficient means of transportation and resource-saving technologies.

Become part of a community of engineers who are aware of their social and ethical responsibility and shape a sustainable future with new ideas and projects.

You can find more information on admission requirements, subject-specific requirements, the application process and the consecutive transition here.

Combine your Master's degree with an MBA in Technology Management at the NIT.

Driving innovation!

MASTER'S PROGRAMS AT TUHH

TUHH
Hamburg
University of
Technology

... using the latest scientific methods in the fields of experimentation, modelling, simulation, and data science.

... with the use of new, smart chemical and biotechnological process technologies!

FACE THE GREATEST TECHNOLOGICAL AND SOCIAL CHALLENGES OF OUR TIME ...

... through concepts and solutions for a transformation of logistics, mobility and infrastructure towards sustainability and resilience.

... by developing and implementing innovative technologies for aviation and the maritime industry.

... with the help of new technologies for an efficient climate and resourcefriendly supply of energy and products!

... by developing networked systems for smart products and applications, including the digitalisation of medical technology!
